

Java Programming Questions on Input and Output

1. Write a program to take an integer input from the user and print it.

Input Example: 5

Output Example: You entered: 5

2. Write a Java program that reads a string from the user and then prints the string along with its length.

Input Example: Hello

Output Example: String: Hello, Length: 5

3. Create a program that takes two integer inputs and outputs their sum.

Input Example: 4 7

Output Example: Sum: 11

4. Write a program that accepts a line of text and outputs it without any leading or trailing spaces.

Input Example: ' Hello World! '

Output Example: 'Hello World!'

5. Write a program that takes three numbers as input and prints them on separate lines.

Input Example: 2 5 8

Output Example:

2

5

8

6. Create a program that reads a floating-point number and formats the output to two decimal places.

Input Example: 3.14159

Java Programming Questions on Input and Output

Output Example: 3.14

7. Write a program to take a character input from the user and display its ASCII value.

Input Example: A

Output Example: ASCII value of A is 65

8. Write a program to accept a sentence from the user and print each word on a new line.

Input Example: Java is fun

Output Example:

Java

is

fun

9. Write a program that takes a user's full name as input and displays it in the format 'Last, First' on a new line for each name.

Input Example: John Doe

Output Example:

First name: John

Last name: Doe

10. Write a program that takes multiple inputs separated by spaces and then prints them, handling newline issues in the output.

Input Example: Hello World Java

Output Example:

Hello

World

Java
