

IMPORTANT TOPICS FOR APTITUDE

Aptitude tests usually consist of four major sections- quantitative aptitude, logical reasoning verbal ability, and data interpretation. The important topics for the aptitude test are listed below sections:

Quantitative Aptitude

In Quantitative Aptitude section specifically, read the question twice before answering to avoid silly mistakes. The common topics of this section are as follows:

1. Divisibility, LCM, HCF
2. Numbers, Decimals, Fractions, Powers
3. Profit, Loss
4. Simple interest and Compound interest
5. Speed, Distance, Time
6. Work and wages
7. Trains, Boats, Streams-upstream/downstream, Circular track questions
8. Cistern and pipes
9. Seating arrangements, Calendar dates
10. Logarithms
11. Probability
12. Permutations and combinations
13. Mensuration
14. Algebra, Percentages
15. Ratio, Proportion, Partnerships
16. Geometry
17. Mixtures and Allegations
18. Simplification and approximations
19. Age
20. Progressions-arithmetic, Geometric, and Harmonic
21. Quadratic Equations
22. Trigonometry
23. Heights and Distances
24. Simple Equations
25. Inequalities

Logical Reasoning

While solving Logical Reasoning questions, remember to never make any assumptions of your own unless specifically asked in the question. Also, make it a habit to write all given information and data before starting to solve the question. The common topics of the Logical Reasoning sections are given below.

1. Coding Decoding
2. Series-missing number, odd one out
3. Cause and Effect
4. Direction and Ranking
5. Blood relations
6. Syllogism
7. Assumptions, Premise and Conclusion
8. Assertion and Reasoning
9. Symbol based problems
10. Input and output
11. Statements and Assumptions
12. Statements and Arguments
13. Matrix arrangement
14. Analogy Test
15. Mapping and best routes
16. Objective Reasoning
17. Selection decision tables

Verbal Reasoning

For acing the Verbal Reasoning section, it is best to develop reading skills. Make it a habit to spend some time reading good books, magazines, and newspapers. This will help you improve your reading skills, vocabulary, grammar along with your ability to make logical inferences.

1. Reading comprehension
2. Vocabulary-synonyms, antonyms
3. Contextual library
4. Jumbled Words
5. Grammar- Subject-verb agreement
6. Error detection and correction
7. Sentence improvements
8. Sentence rearrangements
9. Analogy
10. Theme detection
11. Idioms and phrases
12. Paragraph completion
13. Critical reasoning

Data interpretation

In Data Interpretation questions, as the name suggests the questions are based on making sense out of processed data. The data can be organized in the following formats.

1. Table chart
2. Line chart
3. Bar chart
4. Pie chart
