

1. Tell Me About Yourself

Good morning, and thank you for the opportunity. I'm Challa Jaipal Reddy, currently pursuing my B.Tech in Data Analytics from Kalasalingam Academy of Research and Education in Madurai. I completed my intermediate from Shastra Junior College, Vijayawada, in 2022 with 95%, and my 10th from Vision High School, Sattenapalli, in 2020 with 98%.

Throughout my academic journey, I've gained strong fundamentals in programming, SQL, Python, data analysis, and visualization using Power BI and Tableau. I've also completed hands-on projects and internships, such as Retail Sales Analysis, Customer Churn Prediction, and Walmart Data Analysis.

I'm passionate about transforming data into actionable insights and excited to apply my analytical mindset in a professional setting where I can continue learning and contribute meaningfully.

2. Why Should We Hire You?

I bring a solid foundation in data analytics, paired with hands-on experience in real-world projects. I'm proficient in tools like SQL, Python, Excel, Power BI, and Tableau. My background reflects a consistent record of academic excellence and practical exposure.

I'm also a quick learner, a team player, and highly motivated to grow with the organization. I believe I can contribute by bringing insights that support business decision-making while continuing to develop my skills.

3. What Are Your Strengths and Weaknesses?

One of my strengths is attention to detail-I make sure every step of the data analysis process is handled carefully, which reduces errors. Another strength is my adaptability; I quickly pick up new tools and technologies.

As for weakness, I used to struggle with public speaking, but I've been actively working on it by participating in group discussions and presentations during my academic projects. I've seen a lot of improvement, and I continue to build on it.

4. What Are Your Career Goals?

In the next few years, I aim to grow into a data analyst role where I work on large-scale business problems, uncover trends, and deliver impactful insights. Over time, I'd love to transition into a senior analyst or data scientist role, guiding strategic decisions and possibly mentoring juniors as well.

5. Describe a Challenging Situation and How You Handled It

During my Walmart Data Analysis project, I faced challenges while cleaning large, inconsistent datasets. I resolved this by using advanced SQL queries and Python libraries like Pandas to automate the cleaning process, which saved time and improved accuracy. I learned the value of efficiency and attention to data quality.

6. How Do You Stay Updated With Industry Trends?

I follow data analytics blogs, YouTube channels, and newsletters like DataCamp and Towards Data Science. I also take part in online courses and hands-on projects to stay up-to-date with tools and industry trends.

7. How Do You Prioritize When Working on Multiple Projects?

I start by listing out all tasks and their deadlines. I use tools like Notion and Google Calendar to plan my week. I prioritize based on urgency and impact, and I make sure to allocate focused time blocks for deep work.

8. What Motivates You?

I'm motivated by solving real-world problems using data. Seeing how insights can help businesses grow or improve decision-making really excites me. The learning process and the impact of my work

keep me going.

9. Are You Comfortable Working in a Team?

Absolutely! I've worked on team-based projects during internships and coursework. I believe collaboration leads to better outcomes and also helps me learn different perspectives and approaches.

10. What Did You Learn From Your Internship or Projects?

I learned how to handle real-world data, communicate insights effectively, and adapt quickly to challenges. I also developed technical skills like writing efficient SQL queries, building dashboards in Power BI, and performing in-depth data exploration.

11. Imagine You're Assigned a New Task But Don't Have All the Information. What Would You Do?

I'd start by identifying exactly what information is missing. I'd check any available documentation or previous reports. If needed, I'd reach out to my team or supervisor to clarify the requirements. Once I have clarity, I'd proceed step by step and regularly update my progress.

12. What Do You Know About This Role?

The data analyst role involves collecting, cleaning, and interpreting data to help organizations make better decisions. It also includes building dashboards, reporting insights, and ensuring data accuracy and consistency.

13. What Makes You Different From Other Candidates?

In addition to my technical skills, I bring strong communication and problem-solving abilities. My academic background, project experience, and willingness to learn give me an edge. I'm not just focused on analysis-I'm focused on making it meaningful and actionable.

14. How Do You Handle Feedback?

I see feedback as an opportunity to improve. I always listen with an open mind and try to implement

suggestions. During one project, my mentor pointed out that my reports were too technical for non-technical users, so I adapted and made them more user-friendly, which helped communicate the insights better.

15. Do You Have Any Questions for Us?

Yes, thank you. I have a few questions:

1. What does a typical day in this role look like?
2. What kind of learning or mentorship opportunities are available?
3. How is performance reviewed and feedback given?
4. What are the main goals for your data team in the next few months?
