

Simplified

Essential Data Terms You Need to Know

Pradeep M
@pradeep-m-analyst

1

Data Integrity

Ensuring data accuracy and reliability
throughout its lifecycle.

2

Data Validation

Checking data for accuracy and quality
before use.

3

Predictive Analysis

Making future predictions based on
historical data patterns.

4

Data Pipeline

A series of processes to collect, process, and transform raw data.

5

Data Redundancy

Storing the same data in multiple places for backup.

6

Data Manipulation

Organizing or transforming data for analysis
or presentation.

7

Requirement Analysis

The process of **gathering the needs** and expectations of stakeholders to define the scope and objectives of a project or system.

8

Data Governance

**Managing and using data effectively across
an organization.**

9

Data Mining

Discovering patterns and insights from large datasets.

10

Data Variance

Measure of difference in a dataset's values.

11

Data Aggregation

The process of combining and summarizing multiple datasets or data points to provide a broader view or reporting.

**I hope you find this
valuable! 🥰**

**A like from you would be a great
encouragement**
