

SQL

JOIN VS UNION

Pradeep M
@pradeep-m-analyst

1

JOIN

It is used to **combine rows** from two or more tables based on a **related column** between them.

2

UNION

It is used to combine the results of two or more **SELECT statements** into a **single result set**.

For example, let's consider two simple tables:

Table1

ID	Name
1	Pradeep
2	Tharun
3	Abi

Table2

ID	Name
3	Abi
4	Kishore
5	Vihaan

Now, let's see how **JOIN** work with these tables.

```
SELECT Table1.ID, Table1.Name, Table2.Name  
FROM Table1  
JOIN Table2 ON Table1.ID = Table2.ID;
```

OUTPUT

ID	Name
3	Abi

Now, let's see how **UNION** work with these tables.

```
SELECT ID, Name FROM Table1  
UNION  
SELECT ID, Name FROM Table2;
```

OUTPUT

ID	Name
1	Pradeep
2	Tharun
3	Abi
4	Kishore
5	Vihaan

In simple words

JOIN is like finding **common friends** between you and someone else.

UNION is like **combining all friends** from both of you.

**I hope you find this
valuable! 🥰**

**A like from you would be a great
encouragement**
